Drawings

1. Figs. 2a, 2b, 4a, 4b and 5 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Applicants' Prior Art Fig. 1.

Prior Art Fig. 1 discloses a circuit for performing the method recited in claim 1. Output current transitions are varied by way of the rc circuit comprising the ON

resistance of transistor 12 and capacitor 19 or the ON resistance of transistor 14 and capacitor 19.

4. Claims 1-6, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Chow (5,854,560).

Fig. 1 discloses a plurality of PMOS transistors P103/P104/P105 and a plurality of NMOS transistors N103/N104/N105 performing the method recited in claims 1-4.

Each delay is longer then the previous delay as recited in claims 5 and 9 by way of the series resistance connections. For example, P104 has a delay associated with R whereas P105 has a delay associated with 2R.

The delay durations are controlled by a network comprising resistors R and inherent capacitances as recited in claims 6 and 10.

Conclusion

5. Claims 7, 8, 11 and 12 are objected to as being dependent upon a rejected base claim, but may be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 13-32 appear to be allowable over the Prior Art of record.
